EMBRYOGENESIS™

INFERTILITY DIAGNOSTIC & RESEARCH

Ministry of MSME, Govt. of India

Life Member

INDIAN FERTILITY SOCIETY

Hope for Mother's-to be

Discover Your hope and possibilities with EMBRYOGENESIS, where your dreams ofstarting a family come to life. At our infertility diagnostic centre, we proudly harness thelatest technological advances to address infertility issues with unparalleled efficiency.

EMBRYOGENESIS as the best Infertility diagnostic centre in India stands at theforefront of innovation in Assisted Reproductive Technology (ART) and Reproductivescience, offering cutting-edge diagnostic and fertility solution with personalizedtreatment option to those in need.

We are at EMBRYOGENESIS, committed to making the journey of people strugglingwith infertility, make a road of hope and achievement. Our infertility diagnostic centre is aleader in cutting-edge infertility research and diagnostics, driven by a dedication tooffering individualized solutions to couples hoping to start or grow their families.

WHO WE ARE

EMBRYOGENESIS is more than just a infertility diagnostic & research centre; we are a community of passionate scientists, and healthcare professionals who share a common mission: to make parenthood dreams a reality. With years of experience, a state-of-the-art facility, and an unwavering commitment to excellence, our diagnostic centre stands as a beacon of hope for those seeking answers in their fertility journey.

VISION

To be the leading force in infertility diagnosis, where science, compassion ,and innovation converge to empower individuals and couples on their path to parenthood. As the best infertility diagnostic centre in India , we aspire to redefine possibilities, pioneer breakthroughs, and unite hearts, making dreams of the family a tangible reality for all

MISSION

Provide high-quality, cost-effective, evidence-based Research & diagnostic services to medical fraternity and to help people start their families across the globe.

FOUNDER VIEW

In order to preserve and enhance the fertility of soil, a farmer maintains its nutritional balance by treating it with fertilizers and herbicides. Such preparation is necessary every time to grow the crop successfully and get the quality production. In the similar way, a mother's endometrial profile is unavoidable factor in order to have a successful pregnancy due to its key role in implantation of embryo and providing nutrition during development. There are multiple factors which influence the pre-pregnancy stage of Mother. Primary Infertility, Sub-fertility, RRF, RPL and IVF failure are obstacles of healthy pregnancy outcome. Mother needs intense care and cure before she conceives.
Today, embryo quality is not an issue with advanced ARTs i.e. IVF, ICSI, Laser hatching etc.

Less focussed endometrium is the factor of concern in implantation failure and Successful pregnancy. The endometrium is the rate-liming factor for IVF or successful embryo Implantation.

That's where EMBRYOGENESIS came into light. We provide personalized, diagnosis and treatment option for mothers-to-be before and during pregnancy.

Patent:

A Testing Method for Endometrial Receptivity & Function Assay (ERFA) for Improving Successful Embryo Implantation
(Patent Application No.202431001616 A; Publication Date: 09/02/2024)

A method of improving embryo implantation during IVF
(Patent Application No.202211073981 A; Publication Date: 30/12/2022

Cell Sheet Based Regenerative Therapy in Cardiology
(Patent Application No.202311076252 A; Publication Date: 01/12/2023)

A Method for Assessing Students' Mindset and Psychological Stress Levels before and after Examinations
(Patent Application No.202421004316 A; Publication Date: 09/02/2024)

OUR SPECIALISED SERVICES

EMBRYOGENESIS, offer a range of cutting-edge diagnostic & therapeutic services, including the highly specialized Endometrial Receptivity & Function Assay (ERFA) through Molecular Biomarkers, or "Endometrial Soil Test", Endometrial Receptivity & Maturation Analysis (ERMA), Endometrial Immune Test (Endo-Immune), Endometrial Infection Test (EIT). EMBRYOGENESIS, also offer regenerative therapeutics i.e. LIT, PBMC, Stem Cell and Molecular Hydrogen therapy, each designed to shed light on critical aspects of your reproductive health.

Diagnostic Services

1. **Endometrial Receptivity & Function Assay (ERFA- The Soil Test)**
   (Patent No. 202431001616 A)
2. **Endometrial Receptivity & Maturation Analysis (ERMA)**
   (Patent No.: 202211073981A).
3. **Endo-Immune Test**
4. **Endometrial Infection Test (EIT)**
5. **Endometrial Cytokine Test (ECT)**
6. **Chronic Endometritis Factor (CEF)**
7. **Tumer Necrosis Factor Alpha (TNF α)**
8. **Pregnancy Destroying Molecules (PDM)**
9. **Uterine Natural Killer Cells (uNK Cell)**
10. **Female Genital TB / TB-PCR / PAMP**

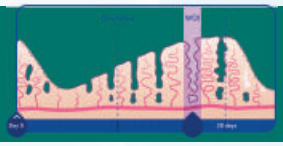

Therapeutics Services

1. **LIT Therapy**
2. **PBMC Therapy**
3. **PRP Therapy**
4. **Stem Cell Therapy**
5. **Molecular Hydrogen Therapy**

(Patent No. 202431001616 A)

ERFA™
Endometrial Receptivity & Function Assay

The Soil Test

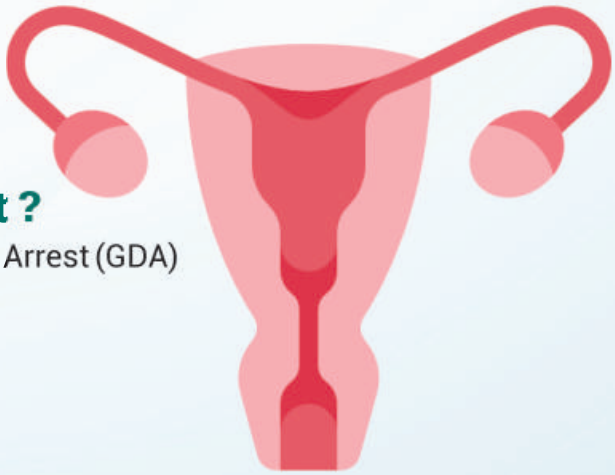

"Explain the Unexplained Sub-fertility & Implantation Failure"

Endometrial receptivity depends upon unique sequence of factors that make endometrium receptive for implantation. We believe that Endometrium is just like the "soil" to the "seed" (embryo) and the influencing factors are the nutrients. Implantation is a multi-factorial process and endometrium is its rate limiting factor. A complete endometrium profile can delineate the cause of implantation failure or IVF failure. For a proper implantation the endometrium needs to be fully developed and mature, functionally receptive, infection free, immune-balanced and immune-tolerant.

We're excited to introduce the revolutionary Endometrial Receptivity & Function Assay (ERFA) or Endometrial Soil test through molecular biomarkers to guide you on your journey to parenthood. ERFA- the Soil test, is a groundbreaking test that assesses the readiness of your endometrium for successful embryo implantation. Trust our experienced team to guide you through the ERFA testing process, and together, we'll unlock the path to parenthood you've been longing for. ERFA- the Soil test defines the role of endometrial factors responsible for sub-fertility, recurrent implantation failure (RIF), recurrent reproductive failure (RRF), recurrent pregnancy loss (RPL) and IVF failure. ERFA- the Soil test assess multiple endometrial biomarkers at the time "Window of implantation" that results in complete Endometrial receptivity and function
analysis.
ERFA- the Soil test is the only single multi-biomarker test of its kind that gives the complete picture of the functional receptive endometrium and explains the unexplained causes of infertility and implantation failure.

Indication for ERFA-The Soil Test:

1. Recurrent implantation Failure
2. IVF Failure
3. Recurrent pregnancy Loss
4. Primary or Secondary infertility

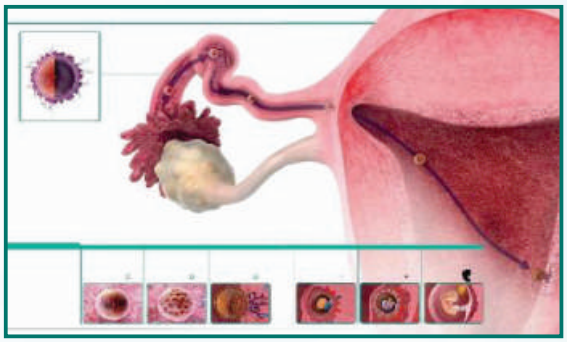

What You Know from ERFA-The Soil Test ?

1. Endometrial proliferation or Glandular Development Arrest (GDA)
2. Endometrial Maturation
3. Endometrial Receptivity
4. Anti Adhesion molecule
5. Endometrial Inflammation & Infection
6. Endometrial Infection
7. Endometrial Cytokines abnormality
8. Endometrial Immune Tolerance

(Patent No. 202211073981A)

ERMA

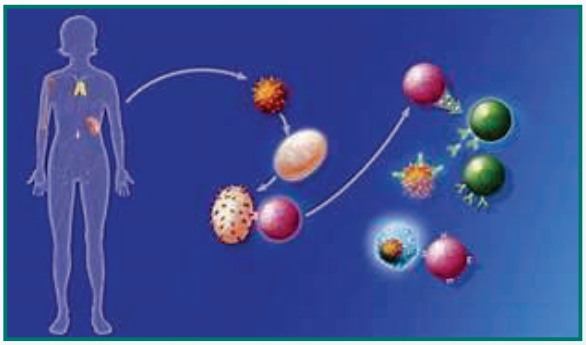

Endometrial Receptivity & Maturation Analysis

Specific molecules, which we call implantation biomarkers, are needed to present or absent at the implantation site at the time of the "window of implantation" (WOI). These biomarkers are dysfunctional at the site of implantation and in the endometrium of females who are suffering from RIF, Recurrent Implantation Failure (RIF), and unexplained infertility. The agonist biomarkers that facilitate the attachment of embryo are called CAM (cellular adhesion molecules). At the same time, specific biomarkers that are antagonists to CAM are called anti-adhesion molecules. The females who are suffering from Recurrent Implantation Failure (RIF) Recurrent Pregnancy Losses (RPL), multiple miscarriages and unexplained infertility exhibit the presence of more anti-adhesion molecules and absence of adhesion molecules. ERMA test assess the endometrium development, maturation and presence or absence of implantation biomarkers that facilitate embryo attachment especially at the time of Window of Implantation.

ENDO

IMMUNE TEST

We understands that the journey to parenthood can be challenging, and recurrent pregnancy loss can be disheartening. That's why we are dedicated to bringing you the ENDO-IMMUNE TEST to help you navigate this intricate terrain. The ENDO-IMMUNE TEST dives deep into the realm of endometrial immunity, providing essential insights into recurrent pregnancy loss (RPL) and unlocking the doors to tailored therapies for successful pregnancies. To analyse the immune competency of the endometrium, the ENDO-IMMUNE TEST comprised of cytokines and immune cells described as active participants i.e. TNF alpha (Th1), PDM (Th17), uNK cells and Plasma Cells or chronic endometritis factors. For implantation to occur, there must be a balance between pro-inflammatory and anti-inflammatory cytokines and infection free.

ENDO-IMMUNE TEST allows the identification of implantation failure or recurrent miscarriage causes in the case where embryonic factor have been normal

EIT

Endometrial Infection Test

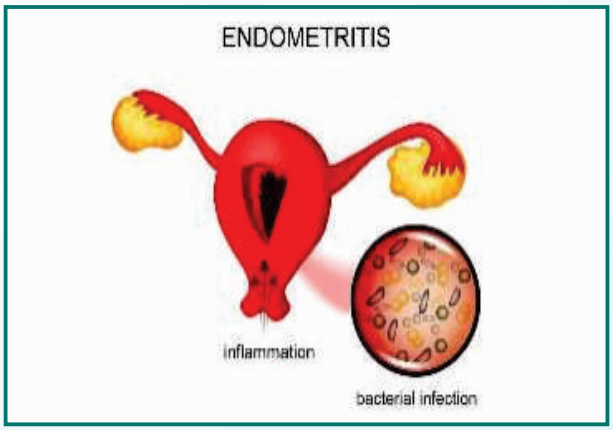

Infection in the endometrium poses a challenge to the implantation process as it incurs potential harm to the environment of the endometrium. The environment of endometrium required for attachment of embryo must be infection-free so that the implantation could occur. In the case of women with RPL (recurrent pregnancy losses) (multiple miscarriages), RIF (recurrent implantation failure (no attachment of the embryo multiple times) and unexplained infertility, the endometrium have infection and inflammation. As infections of the endometrium are asymptomatic, they could remain undiagnosed due to a lack of tests for years. EIT test finds out the possible infection and inflammation in the endometrium, which hinder the process of implantation.

CEF

Chronic Endometritis Factor

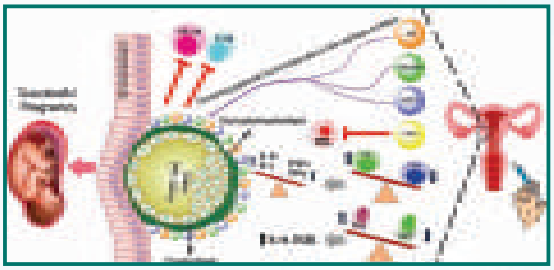

Be it bacterial or viral; infection changes the environment of the endometrium to the extent that it becomes incapable of conception. A specific factor, which we call chronic endometritis factor, is an indicator of endometrial infection. In women with RPL (recurrent pregnancy losses) (multiple miscarriages), RIF (recurrent implantation failure (no attachment of the embryo multiple times) and unexplained infertility, CEF is very high. For implantation to occur, CEF needs to be absent from the endometrium. CEF test finds out the presence or absence of chronic endometritis in the endometrium to rule out the infection in the endometrium that hinders the implantation.

THERAPUETIC SERVICES

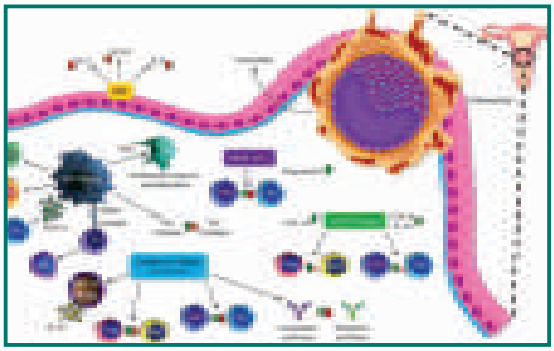

IMMUNOTHERAPY: BALANCING YOUR IMMUNE RESPONSE

LIT THERAPY

Lymphocyte Immunization Therapy (LIT) represents an innovative approach with the potential to help individuals facing fertility challenges. This therapy involves the extraction and processing of a patient's white blood cells (leukocytes), which are then reintroduced into their body to stimulate a specific immune response. By promoting tolerance to the partner's sperm or embryos, LIT Therapy aims to address immune-related infertility issues, such as sperm antibodies or recurrent miscarriages. This personalized treatment offers hope and the possibility of overcoming previously daunting reproductive obstacles, ultimately increasing the chances of successful conception and realizing the dream of parenthood.

PBMC THERAPY

Peripheral Blood Mononuclear Cells (PBMCs) present apromising avenue for individuals seeking assistance with fertility challenges. PBMCs, a type of white blood cell, have a pivotal role in regulating the immune system. In the realm of fertility, PBMCs find application in immunomodulatory therapies designed to address issues like recurrent miscarriages or implantation failure, which have immune-related origins. By carefully modulating the immune response, PBMC-based treatments aim to create a more conducive environment for successful conception and pregnancy

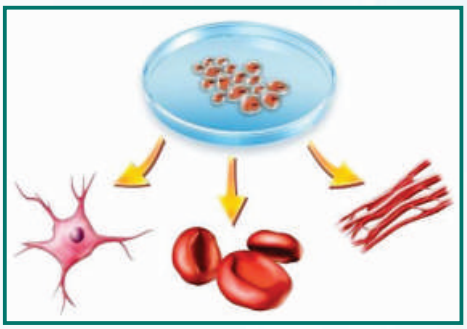

PRP THERAPY

Platelet-Rich Plasma (PRP) therapy emerges as a promising medical technique, showing potential
benefits for couples facing fertility challenges. PRP entails the extraction of a small volume of the patient's own blood, followed by the concentration of platelets, which are then injected into the reproductive region. This innovative approach is thought to boost fertility by promoting tissue regeneration and enhancing blood circulation to the reproductive organs. By revitalizing and fortifying reproductive tissues, PRP holds the promise of improving the likelihood of successful conception for individuals struggling with infertility. It represents a non-invasive, secure, and increasingly popular choice within the realm of fertility treatments, providing fresh hope and possibilities to those on their path to parenthood.

STEM CELL THERAPY

Stem Cell Therapy for Reproductive Health and Gynaecology Disorder Treatment

Stem cell therapy shows promise in the field of reproductive health and gynaecology disorders. In the realm of gynaecology disorders, stem cell therapy presents a promising treatment avenue. Stem cells' capacity to differentiate and repair damaged tissues has generated interest in utilizing them for conditions affecting the female reproductive system. Recent study demonstrates the potential of human mesenchymal stem cell (hMSC) therapy in premature ovarian failure (POF) and infertility, offering new possibilities for managing issues related to hypoestrogenism and primary ovarian insufficiency (Fu et al. 2021). The use of stem cells in creating reproductive system organoids and treating infertility-related diseases, highlighting the role of stem cell-based therapies in addressing male and female infertility issues (Jahan bani et al., 2021). Studies emphasize the evolving landscape of regenerative medicine where the stem cell therapy provides opportunities for revolutionizing the treatment of reproductive health disorders and collectively underscore the significant progress being made in utilizing stem cell therapy to management of gynaecology disorders and improve reproductive health outcomes.

HYDROGEN THERAPY

Molecular Hydrogen therapy for reproductive health and oxidative stress management

Hydrogen is the lightest chemical element, non-toxic, colorless and odorless gas. Considered for a long time a physiologically inert gas, recent studies have demonstrated that hydrogen possesses significant antioxidant and anti-inflammatory properties that make the use of this molecule potentially applicable in many different clinical settings including Reproductive health, Reproductive Tissues, Pregnancy, Neonatal Development and cancer treatment. Research has shown that molecular hydrogen (H2) exhibits antioxidant effects in normal human subjects and patients with diverse diagnoses such as metabolic, rheumatic, cardiovascular, and neurodegenerative conditions, as well as other diseases, infections, physical and radiation damage, ageing, and exercise-related stress.

Hydrogen therapy has emerged as a promising avenue for enhancing reproductive health. Recent research highlights the potential benefits of hydrogen therapies, such as oxy-hydrogen inhalation, in promoting reproductive health by acting as non-toxic antioxidants and anti-inflammatory compounds. Additionally, hydrogen peroxide, a crucial component in reproductive health, plays a significant role in monitoring embryo health and diagnosing male infertility. Studies collectively suggest that hydrogen-based therapies and probiotics could offer novel and effective approaches to supporting reproductive health. Experimental use of hydrogen therapy has shown promise in reducing oxidative stress in both male and female reproductive systems. (Ref: Purdey et al., 2015 ; Russell & Nenov, 2022)

UNDERGRADUATE / POST GRADUATE PROGRAM

B.Sc. / M.Sc. Nutrigenetics & Personalised Nutrition

Nutrigenetics is a field that explores the interaction between genetics and nutrition, aiming to understand how genetic variations influence individual responses to nutrients and dietary patterns. Personalized nutrition, on the other hand, focuses on tailoring dietary recommendations to an individual's genetic makeup, lifestyle, and health status. The combination of these two fields has led to the emergence of a new and exciting academic program.
Eligibility for B.Sc. : 12th (PCB)
Eligibility for M.Sc.: BSc Biological Science, Allied Health Science, including Biochemistry, Microbiology, Biotechnology, and Zoology & MBBS / BDS/ BAMS/ BHMS/MLT/ Pharmacy, Nursing, Veterinary science
Careers: Nutrigeneticist, Nutritionist, Dietician, Genetic counsellors, Research scientists, Academic Researcher/ Professor

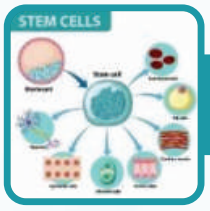

B.Sc. / M.Sc. Cancer Biology

Cancer is a complex and multifaceted disease that continues to be a significant global health challenge. The field of cancer biology has emerged as a crucial area of study aimed at understanding the underlying mechanisms of cancer development, progression, and treatment. Embark on a transformative academic journey as a professional study of cancer cell biology with an M.Sc Cancer Biology program, designed to delve into the intricate realm of cancer research and molecular biology. Eligibility for B.Sc. : 12th (PCB)
Eligibility for M.Sc.: BSc Biological Science, Allied Health Science, including Biochemistry, Microbiology, Biotechnology, and Zoology & MBBS / BDS/ BAMS/ BHMS/MLT/ Pharmacy, Nursing, Veterinary science
Careers: Cancer Biologist, Research Scientist in Oncology, Clinical Research Coordinator, Biotechnology Consultant, Pharmaceutical Industry Specialist, Academic Researcher/Professor, Public Health Analyst, Entrepreneur in Biotech Start-ups, Genetic Counsellor, Clinical Laboratory Scientist, Medical Writer, Bioinformatics Scientist, Principal Investigator in Biomedical Research

B.Sc. / M.Sc. ART & Clinical Embryology

Assisted Reproductive Technology (ART) and Clinical Embryology are specialized fields within the broader realm of reproductive science that focus on helping individuals and couples overcome infertility issues and achieve successful pregnancies. M.Sc. program specifically tailored to these areas reflects the growing importance and demand for highly skilled professionals in Reproductive Technology or Embryology field. This academic program aims to provide students with a comprehensive understanding of the scientific, technological, ethical, and clinical aspects of ART and Clinical Embryology.
Eligibility for B.Sc. : 12th (PCB)
Eligibility for M.Sc.: BSc Biological Science, Allied Health Science, including Biochemistry, Microbiology, Biotechnology, and Zoology & MBBS / BDS/ BAMS/ BHMS/MLT/ Pharmacy, Nursing, Veterinary science
Careers: Clinical embryologists, Academic Researcher/Professor

B.Sc. / M.Sc. Stem Cell & Regenerative Medicine

Stem cell research and regenerative medicine have emerged as cutting-edge fields with the potential to revolutionize healthcare by offering novel treatments for a wide range of diseases and injuries. The Master of Science (M.Sc.) program in Stem Cell & Regenerative Medicine is designed to provide students with a comprehensive understanding of the principles, techniques, and applications of stem cell biology and regenerative medicine.
Eligibility for B.Sc. : 12th (PCB)
Eligibility for M.Sc.: BSc Biological Science, Allied Health Science, including Biochemistry, Microbiology, Biotechnology, and Zoology & MBBS / BDS/ BAMS/ BHMS/MLT/ Pharmacy, Nursing, Veterinary science
Careers: Stem cell Scientist, Laboratory manager, bioprocess engineer, regulatory affairs specialist, and clinical trials coordinator, Academic Researcher/Professor

B.Sc. / M.Sc. Anthropology

Anthropology is a multidisciplinary field that encompasses the study of human societies, cultures, and their development over time. This program combines social sciences, natural sciences, and humanities to offer a holistic approach to studying human beings and their interactions with each other.

Eligibility for B.Sc. : 12th (PCB)/ Any discipline

Eligibility for M.Sc.:: BSc Biological Science, Allied Health Science, including Biochemistry, Microbiology, Biotechnology, and Zoology & MBBS / BDS/ BAMS/ BHMS/MLT/ Pharmacy, Nursing, Veterinary science

Careers: Anthropologist, IAS, IPS, Researcher, Govt. officer, Academic Researcher/Professor

"Gain The Skills to Help Couple Start Their Happy Family"

PROGRAM / COURSES	DURATION	TOTAL COURSE FEE (INR)	SEMESTER FEE (INR)	ELIGIBILITY
B.Sc. ART & Clinical Embryology	4 Years	4,00,000	50,000	12th with Phys, Chem, Bio / Math
M.Sc. ART & Clinical Embryology	2 Years	5,80,000	1,45,000	Graduate in Life science & allied Health Science
PG Diploma ART & Clinical Embryology	1 Year	2,00,000	1,00,000

B.Sc. Clinical Embryology

B.Sc. in Clinical Embryology&Assisted Reproductive Technology (ART) are rapidly evolving fields within the realm of reproductive medicine and signifies a significant step towards meeting the growing demand for skilled professionals in this specialized area of healthcare. This academic program aims to provide students with a comprehensive understanding of the scientific principles, technological advancements, ethical considerations, and clinical practices involved in assisted reproduction and Embryology.

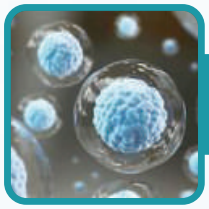

Duration: 4 Years;Fee: 50,000 / Semester
Eligibility: 12th(PCB)

B.Sc. Nutrigenetics & Personalised Nutrition

B.Sc. in Nutrigenetics and Personalized Nutrition (NPN) is designed to equip students with a comprehensive understanding of how genetic variations influence nutrient metabolism, dietary requirementsand overall health outcomes. Nutrigenetics have emerged as cutting-edge fields that integrate genetics, nutrition, and health to provide tailored dietary recommendations based on an individual's lifestyle and genetic makeup.

Duration: 4 Years;Fee: 35,000 / Semester
Eligibility: 12th(PCB)

B.Sc. Stem Cell & Regenerative Medicine

B.Sc. in Stem Cell & Regenerative Medicine is designed to provide students with a comprehensive understanding of the principles, techniques, and applications of stem cell biology and regenerative medicine in healthcare practice. Stem cell research and regenerative medicine have emerged as cutting-edge fields with the potential to revolutionize healthcare by offering novel treatments for a wide range of diseases and injuries.

Duration: 4 Years;Fee: 35,000 / Semester
Eligibility: 12th(PCB)

B.Sc. Anthropology

Anthropology is a multidisciplinary field that encompasses the study of human societies, cultures, and their development over time. B.Sc. in Anthropology is designed to provides students with a comprehensive understanding of human diversity, evolution, Health, Nutrition, Human genetics, and behaviour. This program combines elements of social sciences, natural sciences, and humanities to offer a holistic approach to studying human beings and their interactions with each other and the environment.

Duration: 4 Years;Fee: 35,000 / Semester
Eligibility: 12th(PCB)
